## Superbells® 'Pomegranate Punch' (D)

*Calibrachoa Hybrid*

### GENERAL

Superbells 'Pomegranate Punch' is one of the new 'Stars' of this great series. Joining the other members of the Punch series 'Pomegranate Punch' with its brilliant red flowers with the distinctive Punch centre which mass on the plant for many months of the year takes its place as one of the proven stars of the garden. 'Pomegranate Punch' flowers through the warm summer days of early spring right through until late autumn. Flowers are held clear of the plant making a effect striking like all of the other new plants in the new releases of Superbells since last year 2013. 'Pomegranate Punch' was selected by the breeders for its large bright coloured flowers and strong summer performance. Abundant flowering occurs all through the warmer months of the year on fresh cascading growth. No dead heading necessary.

### ORIGIN

The first plants of *Calibrachoa* were taxonomically described only in 1989, not long ago. The first cultivars were released to market in 1992. The original plants were found in coastal areas clinging to rocks and surviving in some pretty harsh conditions. They so much resembled Petunias that they were originally referred to as "Seashore petunias". The family tree of this genus reaches deep into South America, almost all species found in either Argentina, Brazil or Uruguay. There are 25 known species. Breeding is complex as all varieties are not compatible.

### USES

The prostrate growth habit gives Superbells 'Pomegranate Punch' a new stature when planted alone or in combinations. They will grow best in full sun. As they grow to 20cm in height with comparable width they are well suited to containers, baskets, patios or in the garden. 'With its distinctive bright red flower with its dark patch centres, 'Pomegranate Punch' coming from our Japanese breeders will work well for you.'

### CARE

Keeping plants of all *Calibrachoa* too wet can lead to root diseases. Superbells are bred to be less susceptible to this problem. Allow the top of the soil to dry before watering again. Always look for Superbells and do not accept substitutes, they are bred for hardiness against root rot diseases and outperform other series hands down.

**FERTILISER ADVICE** - Throughout the growing season from September until April apply flower boosting liquid fertilizer rather than one high in nitrogen. Light pruning at any time can be done to keep the plant to the size you need for your container or garden position.

Another super selection for trouble free gardening from the team at Aussie Winners.
